

Tired of the parking drama?

The MySpot 500 Remote-Controlled Parking Barrier is the answer!

The self contained MySpot 500 is a rugged guardian of parking spots. It ships ready to use (no assembly required) and includes hardware for installation in concrete and two remote control key fobs for controlling the unit.

The MySpot 500 is our most advanced offering from our line of parking barriers started in 2002. The barrier incorporates an industry leading technology which allows 3 years of operation on standard Alkaline batteries.

An internal defense mechanism allows the arch to yield to excessive force in case of a frontal collision with the barrier. Force and position sensors reverse the barrier if raised under a parked car.

The MySpot 500 is waterproof and will work partially submerged.

The provided keyfobs can individually control up to nine barriers. Additional remotes can be paired using any previously paired remote. An optional PK250 Transmitter can control up to 250 barriers from 300 feet.

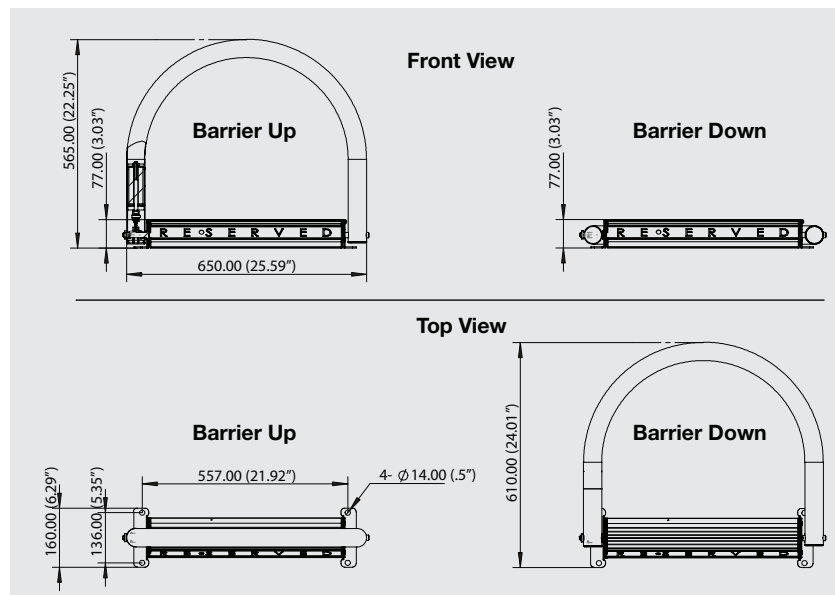

Features

- Advanced Control Options
- Low battery indication
- Retracts if raised under car
- Wirelessly controlled from 300 feet away
- Waterproof
- 2 diagnostics LEDs
- Stand Alone Operation or Link to a Network
- Extensive library of installation, application and operation videos online at www.designatedparking.com
